STAT383 Final Project
Prof. Devin Kapper

This dataset contains daily values for precipitation, snow depth, and maximum and minimum temperature recorded by a weather station located on Mount Mansfield, VT. The data was obtained from NOAA. The data being observed was taken from January 1 to March 31 for the years 2005 and 2020. I will use paired t-tests to determine whether the value of these parameters have significantly changed over time.
